SERVOCUT A400 is a large size, floor mounted, microprocessor controlled cut off machine, with manual chop cutting and automatic table feed systems. It has digital positioning of the specimen in X, Y and Z axis with accuracy of 2 microns (X axis optional). It has cutting capacity of 130/150mm with cut off wheel diameter of 350/400mm. The cutting force and the cutting feed rate can be selected from the front touch pad.

SERVOCUT consists of a cast aluminium base on which the motor and the working space are provided in the form of two separate housings. A large window and sealed 12V lamp in the cutting chamber allow precise observation of the cutting process. A large slotted feed table can accommodate a variety of different clamping devices. The feed table provides a long travel depth making it ideal for cutting long or deep samples in a single pass. Cooling water recirculation is standard – 2 water jets located on both sides of the cut off wheel and 2 jet sprays towards the specimen. Supplied without clamping device.
